```
The present sequence encodes a parent Termamyl-like alpha-amylase from which mutants with increased stability at acidic pH, low calcium concentration and high temperatures have been derived. The sequence was isolated from a Bacillus genomic DNA library. A variant may contain mutations in one or more solvent exposed amino acid residues to increase the overall hydrophobicity of the enzyme or the overall number of methyl groups in the side chains of exposed residues may be increased. The mutations can be incorporated by site-directed mutagenesis or by rariants are suitable for the industrial processing of starch, i.e. starch liquefaction and saccharification. They may also be useful for warning, dishwashing and textile desizing. Hybrid alpha-amylases comprising partial amino acid sequences derived from two or more
                                                                                                                                                                                                                                                                                                           one

```
genomic DNA library. A variant may contain mutations in one or more solvent exposed amino acid residues to increase the overall hydrophobicity of the enzyme or the overall number of methyl groups in the side chains of exposed estables may be increased. The mutations can be incorporated by site-directed mutagenesis or by random mutagenesis. As a result of their increased stability, the variants are suitable for the industrial processing of starch, i.e. starch liquefaction and saccharification. They may also be useful for washing, dishwashing and textile desizing. Hybrid alpha-amylases comprising partial amino acid sequences derived from two or more alpha-amylases have also been created
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      251 AATTGGAGTCTGCCATCCATGCTTTAAAGAATAATGGCGTTCAAGTTTAT 300

                                                                                                                                                                    ó
                                        hydrolysing the alpha-1,4-glucoside bond of the polysaccharide molecule. Alkaline liquefying alpha-amylases exhibit resistance to surfactants used in detergents, and decompose starch or starch-related polysaccharides in a highly random manner. The Bacillus species KSM-AP1378, from which this sequence was isolated, is an alkalophilic Bacillus strain. It was isolated from soil in the vicinity of the city of Tochigi. The enzyme is detergents, particularly on starch dish-washing and laundry
                        This sequence represents an alkaline liquefying alpha-amylase.
Alpha-amylase is an enzyme that acts on starch-related polysaccharides,
                                                                                                                                                                                                                                                          180
                                                                                                                                                                                                                                                                                                             271

The present sequence represents Bacillus licheniformis liquefied alkaline alpha-amylase. The present invention describes mutated forms of the liquefied alkaline alpha-amylase derived from Bacillus species KSM-AP1378 (FERM BP-3048), having the methionine residue at position 202 either deleted or substituted by another amino acid, such as threonine, asolucine, leucine, alanihe, valine or serine. The mutations (such as deletion of arginine or glycine at positions 181 and 182, respectively) but at least 95.2% homologous to positions 181 and 182, respectively) but at least 95.2% homologous to conditions, a high anylase activity, and a high and sustained conditions, a high anylase activity, and a high and sustained formulation of liquid, powder or granular detergent compositions, cespecially those containing bleaches and oxidants. The enzyme retains high activity in the presence of bleaches and oxidants allowing improved detergent formulations to be produced.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           180

It is of use in hard surface cleaning, hand or machine dishwashing and laundry at a temperature of 10 to 25 degrees C. Improved cleaning, stain removal and fabric care are obtained by using it at a concentration of 0.0001% to 0.06%

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to a mutant alpha-amylase. Included in the invention are a gene encoding the mutant alpha-amylase, a vector containing the gene, and a transformed cell recombined by the vector. The enzyme is used in a detergent composition.                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                        protease variant with an amino acid substitution corresponding to position 103 of Bacillus amyloliquefaciens and an alpha-amylase variant. The compositions can be used in e.g. detergent compositions, for cleaning compositions, or fabrics, dishwashing compositions, oral cleaning compositions, detergent cleaning compositions and personal cleaning compositions. The combination of protease variants and alpha-amylase variants in cleaning compositions can provide improved and enhanced cleaning ability, including stain and/or soil removal and/or reduction and/or whiteness maintenance and/or dingy cleanup and/or reduction film removal and/or reduction, over conventional enzyme-containing

The specification describes termamyl-like alpha-amylase variants that have altered amino acid sequences to improve properties. The variants are produced by creating one or more of the following mutations in amino acid sequence of the parent termamyl-like alpha-amylase: T141, K142, F143, D144, F145, P146, G147, R148, G149, Q174, R181, G182, D183, Q169, S170, R171, Q172, F173, P267, W268, K269, W270, D271, L272, G273, A274, L275, K311, G346, K385, G456, W457, K458, P459, G460, T461, V462, T463. The variants can be used for washing and/or dishwashing. They can also be used in the production of sweeteners and ethanol from starch, and/or for textile desizing, and in starch liquefaction and/or saccharification processes. The present amylase can function as the parent sequence in the production of the variants of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 180

The specification describes termamyl-like alpha-amylase variants that have altered amino acid sequences to improve properties. The variants are produced by creating one or more of the following mutations in amino acid sequence of the parent termamyl-like alpha-amylase; T141, K142, F143, D144, F145, P146, G147, R148, G149, Q144, R181, G182, D183, G184, K185, A186, W189, S193, M195, H107, K108, G109, D166, W167, D168, Q169, S170, R171, Q172, F173, F267, W268, K269, N270, D271, L272, G273, A274, L275, K311, E346, K365, G456, M457, K458, P459, G460, T461, V462, T463. The variants can be used for washing and/or dishwashing. They can also be used in the production of sweeteners and ethanol from starch, and/or for textile desizing, and in starch liquefaction and/or saccharification processes. The present amylase can function as the parent sequence in the production of the variants of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                               parent Termamyl-like alpha-amylase with alpha-amylase activity. The variants comprise mutations in 2-6 regions/positions relative to an alpha-amylase from either of two Bacillus species in W09526397, B. Stearothermophilus, B. licheniformis, B. amyloliquefaciens or Bacillus sp. #707. The alpha-amylase variants are detergent additives for use in detergents for dishwashing, manual or automatic laundry. The variants can also be used for textile desizing or starch liquefaction (e.g. for production of sweeteners or ethanol).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   420

```
This sequence represents the parent sequence for new variants of a parent Termamyl-like alpha-amylase with alpha-amylase activity. The variants comprise mutations in 2-6 regions/positions relative to an alpha-amylase from either of two Bacillus species in W09526397, B. stearothermophilus, B. licheniformis, B. amyloliquefaciens or Bacillus sp. #707. The alpha-amylase variants are detergent additives for use in detergents for dishwashing, manual or automatic laundry. The variants can also be used for textile desizing or starch liquefaction (e.g. for production of sweeteners or ethanol).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61 YDLYDLGEFNQKGTVRTKYGTRSQLQGAVTSLKNNGIQVYGDVVMNHKGGADGTEMVNAV 120

from which mutants with increased stability at acidic pH, low calcium
concentration and high temperatures have been derived. The sequence
encoding this protein was isolated from a Bacillus genomic DNA library.
A variant may contain mutations in one or more solvent exposed amino
acid residues to increase the overall hydrophobicity of the enzyme or the
coverall number of methyl groups in the side chains of exposed residues
may be increased. The mutations can be incorporated by site-directed
mutagenesis or by random mutagenesis. As a result of their increased
stability, the variants are suitable for the industrial processing of
stability, the variants are suitable for the industrial processing of
starch, i.e. starch liquefaction and saccharification. They may also be
useful for washing, dishwashing and textile desizing. Hybrid
alpha-amylases comprising partial amino acid sequences derived from two
common and account of the company of the c

AW12098-W12144 represent alpha-amylase variants of the invention. The variants of the invention were created using site directed, or random, mutagenesis of the DNA sequences encoding the parent alpha-amylases represented by AWM12955, AAW12955, AAW12955 and AAR81835 and AAR81836.

AWM12098-W12136, AAW12141, AAW12142 and AWM12144 are specifically variants of the alkaphilic Bacillus strain NCIB 12512 alpha-amylase shown in AAR81835. These variants can have improved thermal stability (such as at temperatures in the range of 40-70 degrees Celcius), and/or oxidation stability, and/or reduced calcium ion dependency. The variants can also have increased alpha-amylolytic activity (especially at pH values in the range of 8.5-10.5), and improved binding of a particular substrate. These variant alpha-amylolytic activity with respect to cleavage of substrate. These sequences can be used in detergent and washing compositions, and for textile desizing. The alpha-amylase variants can also be used in the production of sweeteners and
                                                                                   Alpha-amylase; detergent; thermal stability; oxidation stability; enzymcalcium ion. dependency; alpha-amylolytic activity; washing composition; textile desizing; papermaking; beer-making; ethanol production;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    EVNRSNRNQEISGEYTIEAWTKFDFPGRGNTHSNFKWRWYHFDGTDWDQSRQLQNKIYKF 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61 YDLYDLGEFNQKGTVRTKYGTRSQLQGAVTSLKNNGIQVYGDVVMNHKGGADGTEMVNAV

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ŏ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                            The present sequence is a parent alpha-amylase from which mutants with increased stability at acidic pH, low calcium concentration and high temperatures have been derived. The sequence encoding this enzyme was isolated from a Bacillus genomic DNA library. A variant may contain mutations in one or more solvent exposed amino acid residues to increase the overall hydrophobicity of the enzyme or the overall number of methyl groups in the side chains of exposed residues may be increased. The mutations can be incorporated by site-directed mutagenesis or by random mutagenesis. As a result of their increased stability, the variants are sultable for the industrial processing of starch, i.e. starch sultable for the industrial processing of starch, i.e. starch dishwashing and textile desizing. Hybrid alpha-amylases comprising partial amino acid sequences derived from two or more alpha-amylases have also been created in order to increase enzyme stability.
                                        Variant of parent termamyl-like alpha amylase useful for washing, textile desizing and starch liquefaction, comprising alterations in one or more solvent exposed amino acid residues -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   240

AAW1208-W12136, AAW12141, AAW12142 and AAW1214 are specifically variants of the alkaphilic Bacillus strain NCIB 12512 alpha-amylase shown in AAR81835.

These variants can have improved thermal stability (such as at temperatures in the range of 40-70 degrees Celcius), and/or oxidation stability, and/or reduced calcium ion dependency. The variants can also have increased alpha-amylolytic activity (especially at pH values in the range of 8.5-10.5), and improved binding of a particular substrate.

These variant alpha-amylolytic activity (especially at pH values in the particular substrate, and/or improved specificity with respect to cleavage of substrate, and/or improved specificity with respect to cleavage of substrate. These sequences can be used in detergent and washing compositions, and for textile desizing. The alpha-amylase variants can also be used in the production of sweeteners and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Alpha-amylase; detergent; thermal stability; oxidation stability; enzyme; calcium ion dependency; alpha-amylolytic activity; washing composition; textile desizing; papermaking; beer-making; ethanol production;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAW12098-W12144 represent alpha-amylase variants of the invention. The variants of the invention were created using site directed, or random, mutagenesis of the DNA sequences encoding the parent alpha-amylases.

Crepresented by AAW12955, AAW12955, AAR81835 and AAR81836.

AAW12098-W12136, AAW12955, AAW12142 and AAW12144 are specifically variants of the alkaphilic Bacillus strain NCIB 12512 alpha-amylase shown on the ARR81835. These variants can have improved thermal stability (such as at temperatures in the range of 40-70 degrees Celcius), and/or oxidation stability, and/or reduced calcium ion dependency. The variants can also have increased alpha-amylases also possess improved specificity to a charge variant alpha-amylases also possess improved specificity to a controllar substrate, and/or improved specificity with respect to cleavage of substrate, and/or improved specificity with respect to cleavage of substrate, and/or improved specificity with respect to cleavage of substrate, and/or improved specificity with respect to cleavage of substrate. These sequences can be used in detergent and washing compositions, and for textile desizing. The alpha-amylase containts can also be used in papermaking and beer-making processes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Length 485;
